

OZOCO Complaint Status API

Frontend integration documentation

Base URL: `http://localhost:8000`

Authentication: Bearer JWT access token required on every request.

Citizen Complaint Notes

Officer and admin notes are returned in the `officer_note` field for the citizen's own complaints.

GET /complaints/my

GET /complaints/{complaint_id}

```
{
  "id": 123,
  "status": "resolved",
  "officer_note": "Resolution reviewed by administration."
}
```

Citizens can only access complaints belonging to their own account.

Officer Status Update

PATCH /complaints/{complaint_id}/status

Required role: officer

Officers may set only `under_review` and `in_progress`. Officers cannot set `resolved` or `closed`.

```
{
  "status": "in_progress",
  "officer_note": "Work has started on this complaint."
}
```

`officer_note` is required for `in_progress`.

Admin Status Update

PATCH /complaints/admin/{complaint_id}/status

Required role: admin

Admins may set `under_review`, `in_progress`, `resolved`, and `closed`.

```
{
  "status": "resolved",
  "officer_note": "Resolution reviewed by administration."
}
{
  "status": "closed"
}
```

A complaint must already be resolved before it can be closed. Only admins can resolve or close complaints. A closed complaint cannot be updated.

HTTP Errors

Status	Meaning
200	Request succeeded
400	Invalid status, missing note, closing before resolution, or updating a closed complaint
401	Missing, invalid, or expired token
403	Insufficient role permissions

Status	Meaning
404	Complaint not found
